Case Study — Odoo

Inspiralia: One Odoo System Replaces Five Disconnected Tools

Austrian innovation consultancy Inspiralia consolidated Monday.com, DocuSign, MailChimp and legacy VPN-gated tools into a single Odoo platform — CRM, Sales, Accounting, Project and Planning — in just 3 months, migrating 17,000+ contacts.

80%

more efficient invoicing & CRM

60%

improvement in sales & reporting

40%

more efficient project management

The challenge

Inspiralia's IT landscape was a patchwork: Monday.com for work tracking, DocuSign for signatures, MailChimp for marketing, plus legacy tools locked behind a VPN. Every process crossed three or four systems, data lived in silos, and simple things like invoicing took far longer than they should have.

The solution

Working with Odoo partner Kaiser Digital, Inspiralia replaced the whole stack with Odoo — CRM, Sales, Accounting, Project and Planning in one integrated platform. The full migration, including 17,000+ contacts, was completed in 3 months.

The results

Invoicing and CRM processes run **~80% more efficiently**, sales and reporting improved by **~60%**, and project management is **40% more efficient**. One system, one login, one source of truth.

Why it matters for SMBs

Service firms accumulate SaaS subscriptions the way junk drawers accumulate batteries. Inspiralia shows the math of consolidation: fewer tools, fewer logins, fewer places for data to hide — and a measurable efficiency dividend in the first year.
