Case Study — Odoo

Purish: From Paper and Excel to Same-Day Shipping with Odoo

Berlin cosmetics distributor Purish replaced paper-and-Excel warehouse operations with Odoo Inventory, Purchase and Accounting — doubling purchase-to-invoice efficiency and shipping near same-day even during peak sale volumes.

100%

efficiency gain, purchase-to-invoice

Same-day

shipping even at peak volumes

Hours

to onboard temp staff (was weeks)

The challenge

Purish distributes 7 international cosmetics brands into German drugstore chains, runs its own webshop, and sells on marketplaces like Amazon and Douglas — all coordinated on paper and Excel in the warehouse. Peak season meant chaos: slow fulfillment, training temps for weeks, and no real-time picture of stock.

The solution

With Odoo partner bobco GmbH, Purish implemented Odoo Inventory, Purchase and Accounting, digitizing the warehouse end to end — from purchase order to invoice, with real stock visibility across every sales channel.

The results

Purchase-to-invoice processes run **100% more efficiently**. Orders ship **near same-day even during peak Summer Sale volumes**. And seasonal temp staff — once a weeks-long training burden — are now productive in **hours**.

Why it matters for SMBs

Distributors live and die on fulfillment speed. Purish proves you don't need an enterprise WMS to get enterprise-grade throughput — you need one system where inventory, purchasing and accounting actually talk to each other.
